EDUCATION

Bachelor of Science in Computing Science, University of Alberta September 2022 – June 2025

Relevant Coursework: Web Design & Development(AUCSC 218), Software Engineering(AUCSC 220), Networks & Security(AUCSC 455), Data Structures and Algorithms(AUSCI 235)

PROJECT EXPERIENCE

HackED 2025 - CampusGigs (Hackathon) - https://github.com/kuznimyk/mixed-baddies_fixed.git

Flask - MongoDB Atlas - PyMongo - JavaScript - Bootstrap

- Built intuitive UI screens for a gig marketplace connecting university students, iterating rapidly on feedback within a 24-hour hackathon environment while maintaining a clean and consistent design across all views.
- Implemented data-driven rendering and partial UI refresh patterns to deliver fast, responsive interactions across key marketplace views, reducing perceived load time and improving overall user experience.
- Maintained a consistently shippable main branch throughout the hackathon using structured Git workflows and CI checks.

WORK EXPERIENCE

Full-Stack developer, Rentino, Remote **September 2025 - Present**

- Built peer-to-peer rental marketplace backend using Django/DRF, enforcing clean separation between API, business logic, and persistence layers to support long-term maintainability and feature scalability.
- Designed PostgreSQL schemas with atomic transactional writes, eliminating race conditions and partial update failures across all core marketplace operations including bookings and payments.
- Integrated Celery workers and beat scheduler to offload long-running tasks from the request path reducing average API response time by 30% through Redis caching and adding retry-safe automation for time-based operations.
- Containerized services with Docker, integrated Redis caching, and configured CI/CD pipelines with structured logging for production-ready, observable deployments across staging and production environments.

Software Developer, Confidential Client (B2B SaaS), Remote **July 2025 – Present**

- Translated product requirements into shippable features across 3+ release cycles, improving UI consistency and reducing post-release bug reports by an estimated 30% through careful pre-release testing.
- Built interactive scheduling views with AJAX-style updates and client-side caching, reducing visible UI stalls and cutting average calendar load interactions by over 50%.
- Diagnosed and resolved recurring data and UI bugs through structured Git workflows and automated checks, reducing repeat issue reports by approximately 40% over 3 months of active maintenance.
- Integrated Stripe payments and webhooks alongside Twilio SMS and SendGrid email notifications, increasing payment confirmation reliability and on-time attendance rate by 25% within the first month.

Junior Freelancer, UpWork, Remote **January 2021 - November 2023**

- Delivered responsive website updates for 10+ clients, achieving consistent client approval on first or second revision by maintaining close attention to cross-device layout stability and design fidelity.
- Resolved CSS/HTML and browser compatibility issues across Chrome, Firefox, and Safari, reducing layout breaks on mobile viewports by roughly 60% across maintained projects.
- Integrated third-party APIs including analytics and monitoring tools into 5+ client stacks, enabling new data flows and reducing manual reporting overhead for each client by several hours per week.

SKILLS

- **Front-end:** HTML5, CSS3, React, responsive design, mobile development
- **Tools & Services:** PostgreSQL, Git, AWS S3/R2, AWS EC2, AWS ECS, Redis, Linux, Stripe
- **Core Areas**: REST APIs, payments/ledgering, background jobs, auth & RBAC, ops tooling & audit trails
- **Back-end:** Python, Django, Django REST Framework, Celery, Flask

Certifications & Additional Training

- **DevOps Course – EPAM Systems**
  Date Completed: March, 2022
  Focused on modern DevOps tools, CI/CD pipelines, cloud infrastructure, and automation practices, enhancing my skills in integrating software development and operations.
